NEW TREATMENT FOR DEPRESSION NOW AVAILABLE IN SEACOAST REGION
Transcranial Magnetic Stimulation Clinic Scheduled to Open in Portsmouth

Transcranial Magnetic Stimulation (TMS), a revolutionary new treatment for depression and a range of other neuropsychiatric disorders, will soon be available in the Seacoast region. **The TMS Center of New England** is scheduled to open in Portsmouth in September and will be the first private clinic north of Boston to offer this new, cutting edge treatment.

TMS is a safe, painless, non-invasive treatment that uses electromagnetic energy to stimulate the brain. It is a highly effective treatment for depression but causes none of the side effects which are often associated with antidepressant medications, such as weight gain or sexual dysfunction.

In addition, TMS has been found to be effective in a number of other conditions, including fibromyalgia, autism, obsessive-compulsive disorder, Parkinson's disease, migraine, and PTSD.

Dr. Karl Lanocha, Medical Director of **The TMS Center of New England**, was the first physician in New Hampshire to be certified in this revolutionary new treatment. For 20 years, he was Medical Director for Psychiatric Services at Concord Hospital in Concord, NH and has been named by New Hampshire Magazine as one of New Hampshire's "Top Docs" for four out of the past five years. He has more than 25 years of experience in neuromodulation therapy and was trained in TMS at the Berenson-Allen Center for Non-invasive Brain Stimulation at Beth Israel-Deaconess Medical Center in Boston.
